CONE BIOPSY Post-Operative Instructions

You have had a procedure referred to as a Cone Biopsy of the Cervix (opening of the womb). In this procedure a cone portion of the cervix was removed to treat dysplasia.

It is normal to have a bloody discharge for several weeks after the procedure.

It is recommended that you:

1. Abstain from sexual intercourse for 3 (three) weeks after the procedure.
2. Minimize physical activities for 2 days.
3. No aerobics for one (1) week.
4. No tampons until your second period after this procedure.

Notify our office if you have heavy bleeding (changing a pad every hour), fever > 100.5, severe cramping

Thank you for taking care of your health!
